

Notes

- "Level In" input is 0V to -10V.
- "PD In" input is:
Jumper up: amplified detector, 0V to +2.5V into 50 Ohms.
Jumper down: straight PD, 0uA to +1mA into 50 Ohms.
- Audible alarm device has jumper so that other than +5V can be used.
- Can add front end logarithmic amp to PD input, such as TI's LOG114.

B2	Aug'08	A.Stummer	Added saturation base-emitter resistor.
B1	July'08	A.Stummer	New PCB: add gain pot, move alarm switch, misc minor.
A2	July'08	A.Stummer	As assembled on Rev:A1 PCB.
A1	June'08	A.Stummer	Initial design on Rev:A1 PCB.
